

# **DESPLIEGUE DE RESTAPI EN HEROKU**

Antes de subir la aplicación a github debemos asegurarnos que estamos trabajando con mongo atlas, para disponer de nuestra base de datos en la nube.

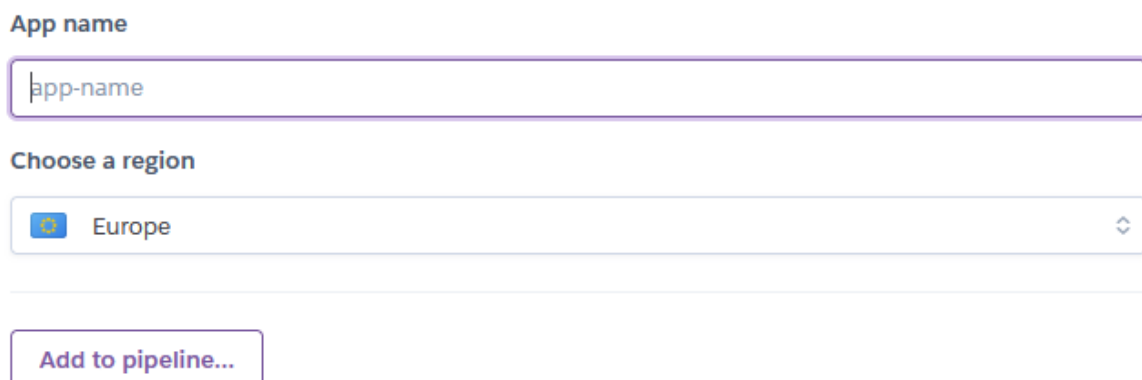

Una vez hecho esto procedemos a subir la aplicación a hithub.

The screenshot shows a GitHub commit interface. At the top, it says 'FerreradelaFuentelsaac first commit' with a menu icon and '1 minute ago' with a refresh icon and the number '1'. Below this is a table of files committed.

build	first commit	1 minute ago
src	first commit	1 minute ago
.gitignore	first commit	1 minute ago
package-lock.json	first commit	1 minute ago
package.json	first commit	1 minute ago
tsconfig.json	first commit	1 minute ago

Con el proyecto subido a github pasamos a la subida a heroku del mismo.

The screenshot shows the output of the 'heroku add-on' command. It has two sections: 'App name' with a text input field containing 'app-name', and 'Choose a region' with a dropdown menu showing 'Europe'. At the bottom is a button labeled 'Add to pipeline...'.

App name

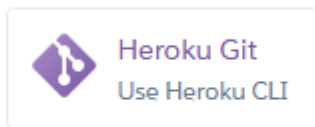

app-name

Choose a region

Europe

Add to pipeline...

En heroku creamos una nueva aplicación y continuamos.

Conectamos la app de heroku a github para acceder a ella.

Deploy a GitHub branch

This will deploy the current state of the branch you specify below. [Learn more](#).

Choose a branch to deploy

 main 

Deploy Branch

Receive code from GitHub 

Build **main** 03340e39 

Release phase 

Deploy to Heroku 

Your app was successfully deployed.

A continuación vemos que se ha desplegado la app correctamente y posteriormente comprobamos su funcionamiento mediante alguna de las urls.
